Over the past century researchers have attributed the symptoms that today are labeled as Tourette syndrome to various etiologies. Although most investigators have accepted Gilles de la Tourette's initial description of a symptom complex of tics and involuntary vocalizations, most have rejected his claim that "tic disease" resulted from hereditary degeneration.

Tourette syndrome is a set of behaviors, including recurrent ticcing and involuntary shouting (sometimes cursing) as well as obsessive-compulsive actions. The fascinating history of this syndrome reveals how cultural and medical assumptions have determined and radically altered its characterization and treatment from the early nineteenth century to the present.
