Drag (physics) - Wikipedia

Sun, 17 Feb 2019 00:30:00 GMT

In fluid dynamics, drag (sometimes called air resistance, a type of friction, or fluid resistance, another type of friction or fluid friction) is a force acting opposite to the relative motion of any object moving with respect to a surrounding fluid. This can exist between two fluid layers (or surfaces) or a fluid and a solid surface. Unlike other resistive forces, such as dry friction, which ...

4 8 16 In the first call to the function, we only define the argument *a*, which is a mandatory, positional argument. In the second call, we define *a* and *n*, in the order they are defined in the function. Finally, in the third call, we define *a* as a positional argument, and *n* as a keyword argument. If all of the arguments are optional, we can even call the function with no arguments.
