Bariatric surgery is an effective method of weight loss for the treatment of morbid obesity. It is more effective when combined with nutritional care, which is sometimes complex, always ongoing and differs between surgical procedures. In Australia, the three most common bariatric surgical procedures ...

There is strong and consistent evidence that obesity management can delay the progression from prediabetes to type 2 diabetes (1,2) and may be beneficial in the treatment of type 2 diabetes (3–8). In overweight and obese patients with type 2 diabetes, modest and sustained weight loss has been shown to improve glycemic control and to reduce the need for glucose-lowering medications (3–5).
