Between 1690 and 1692, the French physicist Denis Papin, designed and built two submarines. The first design (1690) was a strong and heavy metallic square box, equipped with an efficient pump that pumped air into the hull to raise the inner pressure. When the air pressure reached the required level, holes were opened to let in some water.

Watch these videos and note the capabilities America's Army has lost-and needs to regain. The 300+ mph PC-12 might be a good candidate for a faster Army grasshopper that can also do Airborne Forward Air Control (FAC) duties so the USAF's too-fast fighter-bombers can be directed to hit actual combatants and not murder civilians. In USAF service now, they are called U-28s.
